

Project 04:

Object in Motion

Andy Warhol, "Chelsea Girls" (1966)

Description:

By this point in the semester, you've developed a rich understanding and relationship with your object. We've taken an object, and through lots of deep looking, thinking, making, and iterating, and we've translated it from 3D to 2D and back to 3D.

For our final project, we'll take the next step and translate your object into 4D by using time and narrative. We will return to our grid to create a motion poster combining type and image. Your final composition will be a 2 x 3 grid, where three of your squares utilize motion.

These compositions will seek to change the meaning or connotation of your objects across time – how can the juxtaposition of motion with a static image change how we see the original form? How can these compositions tell a particular story about your object?

Part 1:

Refer back to all of your notes, brainstorm, and observations on your object this semester. How can these notes inform the theme of your composition? What new words emerged after you rescaled your object? What textures might surface?

Part 2:

Start with quick sketches, either on paper or on your computer. The goal here is to generate a lot of possibilities without diving too deeply into any single idea. Use whatever material is helpful - you may use found images, text, drawings, scans, fingerpaints, etc., but 1 component of your final composition must be handmade.

- You will be using a 1920 x 1280 artboard in the program of your choice (Each square will be 640 x 640). Start applying your sketches to this size document to get a sense of scale and proportion.

Part 3:

Design three squares that can be animated. Design three squares that can be static. Remember to consider the entirety of the grid, not only the square. For instance, you could use one image that you crop in different ways, or apply a similar treatment to all six squares.

Your animations should last for between 0.5 and 2 seconds, and the animation should loop.

Deliverable:

- Your motion poster grid (see *image below*) rendered as a hi-res MP4. It can be *either portrait or landscape*:

Animated	Static
Static	Animated
Animated	Static

Animated	Static	Animated
Static	Animated	Static

Goal:

Design a motion poster that communicate(s) an idea about your chosen object using type and motion.

Objectives:

- Understand connotative meaning and/or the use of visual metaphor through motion
- Create interesting imagery that changes over time
- Understand how to use time and motion to reinforce, or alter, an image's message.
- Demonstrate an understanding of how typography in motion can influence imagery.
- Understand how to juxtapose static and animated imagery to create new meaning.
