

1. Type Specimen Poster

A specimen of Baskerville's Types

[GT America online type specimen](#)

Description:

Design and produce a type "specimen" poster for a typeface. A type specimen is a printed design that demonstrates the range of a typeface, applied to headlines and text in a variety of sizes. Each variation of the typeface should be labeled on the page. Type specimens have existed for centuries to help designers pick a font for a project. Type specimens today can be wildly flamboyant or classical in their approach.

Requirements:

- 19''x 27''.
- Upper & Lowercase letter forms and digits 0-9.
- A written paragraph of the history of the typeface: designer, foundry, country of origin, when released, was it designed for a specific purpose (newspaper, highway signs, etc.), classification
- Name of the font must be included within the design as an element. Example, if Helvetica is your typeface, the name Helvetica must be included in the design.
- Design must be organized within a grid system.
- All type weights of the assigned typeface family must be used in the design.
- Letterforms may not be distorted.
- Design must include dramatic contrasts in scale, in addition to a strong relationship of positive and negative space to create a strong visual hierarchy.
- Label unique typographic anatomy specific to this typeface.
- Your name must be on the poster (very small) somewhere.

Consider:

- A theme or text that could be used to reinforce the meaning of the typeface
- Unique glyphs in the typeface: swashes, arrows, decorative glyphs, etc.

Goal:

Design a type specimen poster that introduces the visual characteristics of your assigned typeface using InDesign.

Objectives:

- Establish and use a simple grid to organize and align elements.
- Cluster elements to create different typographic densities.
- Express the nature of the typeface through its overall design.
- Adjust leading and tracking to create legibility.
- Compose hierarchy through: emphasis, contrast, balance, repetition, alignment and flow.
